DETAILED ACTION

Allowable Subject Matter

Claims 1-10 are allowed.

Silver has a very high thermal conductivity and none of the references cited teach a heat transfer structure with a thermal conductivity substantially greater than silver.

The heat conductivity of silver is 415 W/mK and the examples of the instantly claimed material have a conductivities from 45,050 - 3,183,000 W/mK, therefore the examiner has interpreted substantially greater than silver to mean at least 100 times greater than silver. Additionally, in light of the specification, the examiner has interpreted heat transfer medium or structure to mean a substrate having three layers of mixtures, wherein one layer is the instant composition.

Thus, it would not have been in the preview of the skilled artisan to produce the instant layered heat transfer medium having the instant heat transfer structure with a thermal conductivity 100 times greater than silver in view of any of references cited.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
